

# megaline OPTIX

INSTANTANEOUS  
WHEEL ALIGNMENT  
MEASUREMENT  
WITHOUT CONTACT

## DISCOVER A NEW WHEEL ALIGNMENT EXPERIENCE

*megaline OPTIX works contact-free, without the use of clamps or targets, protecting the rim and reducing operating time. Every step is designed to optimise efficiency and ensure fast, high quality service.*

***More vehicles managed, more satisfied customers, more business opportunities!***

megaline

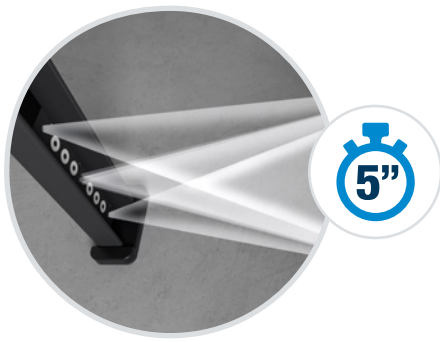

An on-screen wizard assists the operator in positioning the vehicle, and the user-friendly software makes the user experience simple and accessible even to the less experienced operators.

The system measures wheel alignment without contact, eliminating the need for wheel clamps, targets or sensors, reducing time and the risk of wheel damage.

In just 5 seconds, the system measures toe and camber angle without the need to run out the rim, further speeding up the process.

## Immediate results in 5"

Thanks to sophisticated three-dimensional scanners, **megaline OPTIX** is able to perform a precise and detailed wheel alignment measurement in just 5 seconds. The system measures camber and toe angle with extreme accuracy. This speed of the system optimises operating time and provides a more efficient service right from the very first stages of the job.

## Fully automatic

**Megaline OPTIX** is fully automatic and doesn't require the use of clamps, targets or sensors, nor manual operations to adapt to vehicles with different wheelbases. It doesn't require a levelling lift, rim run-out or brake pedal lock to measure caster, ensuring a fast and efficient process with minimal operator intervention.

## Maximum adaptability, minimum maintenance

The system is highly adaptable to any workshop and requires little maintenance due to the absence of mechanical moving parts. Detection cameras are self-calibrating, ensuring reliability and continuity of operation over time. This results in a higher operational continuity and long-term reliability.

## Increased turnover

Thanks to the complete automation of the measurements **megaline OPTIX** makes it possible to quickly check the wheel alignment of any vehicle. The system generates an immediate and easy-to-understand report, which is also useful for the end users, showing out-of-tolerance angles and possible consequences for driving. In this way, the system provides concrete support for consultancy and sales activities, increasing the number of maintenance services carried out and improving customer satisfaction.

Caster angle measurement is accelerated by the automatic turntables (optional), which unlock automatically.

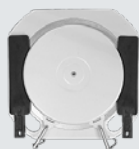

The automatic pre-selection, based on the vehicle dimensions already recognised, filters the list of models and speeds up the selection of technical specifications.

An automatic report details any driving problems caused by out-of-tolerance angles and the adjustments required. The audit is an effective tool for proposing the adjustment service.

## Standard accessories

Two premium turnplates for cars complete with paddles

50" monitor + wall mounting kit

Brake lock

Steering lock

Keyboard

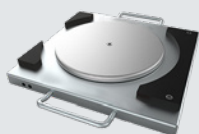

Webcam

## Optional accessories

Monitor support column

Two turntables with automatic lock/unlock

## Versions

### MAX

Measurement of vehicles on the ground for acceptance lane and adjustment on the fixed height lift

### LOW

Measurement of vehicles on the ground for acceptance lane and adjustment in pit

## Software packages

### GOLD\*

Database license

Automatic updates of vehicle specifications in real time

Automatic software updates

Recurrent vehicle number plate recognition (the system recognises the number plate and instantly identifies previously registered vehicles, automatically retrieving their specifications to speed up the process)

Remote assistance

Report sharing via WhatsApp, E-mail or SMS

App for remote control from tablet or smartphone

DMS connection via Workshop.net for direct link between workshop and data management system

\*Free of charge for the first year

### PLATINUM

In addition to the GOLD package: automatic identification of technical specifications (the system automatically identifies the technical specifications of a vehicle on its first visit to the workshop, even if it has never been registered in the software before)\*

\*Available for certain countries only
